INFORMATION SYSTEM FOR MONITORING AND INFORMING ENTITIES RELATED TO ROAD TRANSPORT (VEKTRA)

SOLUTION DESCRIPTION

The purpose of information system is to provide e-services for municipal institutions related to road transport, to develop tools for data exchange between Road Transport Inspectorate and other EU institutions, to integrate into a network of European Register of Road Transport Undertakings, provide information about transport companies and monitoring the entities, to summarize licences granted to transport companies and intellectual risk management tools.

BENEFITS

- E-services helping the business entities related to road transport to prepare for inspections performed by the Inspectorate, receive notifications on the planned or unplanned inspections, access an inspection report and questionnaire, get information on the violations detected during control, transfer tachograph card data, etc.
- E-services helping municipalities to manage data (issued licenses and their validity) of the licensed carriers, manage information about professional competencies of the licensed carriers and transport managers, create reports and selected data on the carriers licensed by municipalities.
- Tools for data exchange about the road transport related entities between the Road Transport Inspectorate and other EU institutions.
- Intellectual risk management module for supervision of entities related to road transport: automated risk calculation, processes for planning, performing, analysis and management of entity activities' control.
- Data management, search, selection, reporting possibilities.
