

## NATIONAL VISA INFORMATION SYSTEM (N.VIS)

### SOLUTION DESCRIPTION

National visa information system (N.VIS) serves as a prime national system, that collects necessary data for issuing Schengen Visa. N.VIS is connected to Central Visa information system (C.VIS) and provides means to exchange data with it. System provides functionality that allows external service providers and foreigners to electronically apply for visa, manages exchange of data between electronic application website and N.VIS, which manages exchange of data with C.VIS. N.VIS helps a consular office to better organize its time, manage visitors' traffic.

### BENEFITS

- Facilitated checks and the issuance of Schengen visas;
- Fighting abuses (help in fighting and preventing fraudulent behaviours, such as "visa shopping" (i.e. the practice of making further visa applications to other EU States when a first application has been rejected);
- Protecting travellers: Biometric technology enables the detection of travellers using another person's travel documents and protects travellers from identity theft.
- Enhancing security: N.VIS assists in preventing, detecting and investigating terrorist offences and other serious criminal offences.
- Efficient and convenient way to apply for Schengen visa.
- Efficient tool for visa issuance process.
