VIRTUAL ELECTRONIC HERITAGE SYSTEM (VEPS)

SOLUTION DESCRIPTION

The purpose of VEPS system is to digitize and publish in portal www.epaveldas.lt various valuable objects of the cultural heritage. The system is designed to store and operate a huge quantity of digital objects and is highly scalable. The VEPS portal provides efficient and convenient access to many of cultural heritage digitalized objects for all who are interested in art works, old books, magazines, manuscripts, maps, metrics, chronicles and sound recordings. All this together creates a unique, rich and vivid panorama of the Lithuanian cultural heritage.

BENEFITS

- Long-term storage of digitized heritage contents.
- Digitization of cultural heritage documents/objects and publishing them in portal.
- Unified access to cultural heritage objects of libraries, museums, archives.
- Easy search, convenient review and ordering of objects in portal.
- Integrated thesaurus of personal names, geographical names and historical chronology as its conceptual backbone serving as a rich knowledge base and effective tool for semantic search within the system.
- Integration into a common European cultural heritage space.
- E-services making more convenient and faster access to the digitized heritage contents.
