

IDENTITY MANAGEMENT SYSTEM

SOLUTION DESCRIPTION

As one of the biggest institutions in Lithuania, the State Social Insurance Fund Board (SODRA) works with more than a dozen information systems. To modernise the management of these systems in order to make it more cost-effective and better safeguard the information that SODRA gathers, SODRA implemented one of the largest-scale IT solutions in the country – an identity management system based on Microsoft Identity Manager (MIM) which automates the administration of access rights to information systems.

BENEFITS

- Designed for truly large-scale organisations;
- Creation of a single centralised space from where employees' access to all systems is automatically controlled;
- System made it possible to grant rights not to a specific person, but to a job title;
- Solved a security gap – closing connections by former or “unknown” employees whose access rights to the system were being used by other employees;
- Business processes reviewed and optimised;
- Personal data and information in the Active Directory system made in order.

ABOUT COMPANY

The key to competence is deep specialisation, and deep specialisation is usually narrow. But today's business challenges demand complex, all-embracing solutions. How can this conflict be resolved? Blue Bridge Group combines the different IT competencies within a single corporate family. Each company in the group develops specialised competencies in great depth and subtlety, creating its own highly professional IT profile.
