

## OPEN SOURCE INTELLIGENCE

### SOLUTION DESCRIPTION

Open-source intelligence (OSINT) and Social Media Intelligence (SOCINT) is intelligence collected from publicly available sources, such as traditional media (newspapers, magazines, radio), digital media, internet websites, and user-generated content in social networks, blogs, web communities, multimedia sharing sites, etc. Today open-source intelligence methods are being increasingly used by both the Government agencies and various businesses. The solution empowers the clients to collect and monitor open sources, alert, and generate reports on any subject of their choice.

### BENEFITS

- Automating information collection and reducing informational clutter;
- Provision of information in support of criminal investigations;
- Monitoring, identification and alerting on upcoming selected events;
- Alerts on activities related to terrorism, cybercrime and public order;
- Optimizing the use of your human resources;
- Empowering teams with time to react;
- Receiving structured data from hard-to-structure sources;
- Possibility to integrate with popular analysis instruments.
