

## SECURITY OPERATING CENTER (SOC) SERVICES

### SOLUTION DESCRIPTION

Organizations and businesses face complex threats that target their critical assets. Advanced threat monitoring services help to successfully anticipate and address these threats. A security operating center (SOC) monitors the network for security events, analyses them and detects specific situations that may pose a threat to an organization.

### BENEFITS

- Detection of security incidents at an early stage;
- Maximizing visibility of suspicious activities and anomalies;
- Thorough monitoring expands ability to mitigate cyber security threats;
- Invoking of incident handling procedures;
- Improving the agility of computer network defence mechanisms;
- Detection and recording of organisation-specific security events;
- Identifying threats to organization's integral security;
- Forensics operations to perform deep inspection of media and network traffic.

### ABOUT COMPANY

We are a cyber security technology consulting, incident response and applied research company. We focus on services for specialized public service providers, finance industry and corporations with high data sensitivity.
